

**\*\*WORK alongside the MINISTRY OF JUSTICE\*\***

Unilink are an award winning SME in the UK who design and develop innovative software for criminal justice agencies in the Government and private sector. They are a leading international supplier of prisoner self-service technology working with the Police, Prisons, Probation services and secure establishments including Immigration and Secure Training Centers and Secure NHS sites.

Unilink approached Acante as they needed hardware to complement their software which promotes self-sufficiency within Prisons. They wanted a custodial self-service solution on an ATM style touch screen Kiosk that would be user friendly, simple yet rugged and robust.

Our in-house design team worked with Unilink to deliver a bespoke design, called the Delta Kiosk, which met all their criteria. The Delta Kiosks have allowed Unilink's customers to reap from the benefits of the combined solution which have increased efficiencies and cost savings, leading to the product demand growing rapidly.

Acante worked hard to ensure Unilink's requirements were perfectly matched empowering them to confidently recommend our services and helping them to win over significant Public Sector clients such as the Ministry of Justice.

Working alongside Acante has led to the design and manufacture of Unilink's first generation Kiosk enabling Unilink to deliver a robust, hard wearing Kiosk solution that is suitable for the Prison environment. Since the First-generation model was launched Acante have continued to update and modify to satisfy Unilink's specifications which has led to the fourth-generation release this year. Since launching the Delta Kiosk, Unilink have seen an immense increase in product demand and to date have implemented over 500 self-service Kiosk in the UK and abroad.

***"The Kiosks are fantastic. Their introduction has meant that they have cut down on all the paperwork that was associated with prisoner monies and canteen. It is these areas that have undoubtedly had the most effect."***
