

ACANTE

About Page

Acante has an excellent reputation in the kiosk marketplace for producing innovative, secure and high-quality solutions. Designed and manufactured in the UK, Acante's range has been specifically developed for the personal identification, information and self-service markets, combined with the ability to produce bespoke kiosk solutions to satisfy customer requirements.

Utilising 30+ years of experience in developing kiosk solutions, Acante has produced a modern, innovative and flexible kiosk range designed to be high quality, affordable and secure. Focused on ident, inform and serve, the range provides a perfect balance between customisation and standardisation, offering a tailored solution without the cost and lead time of a bespoke product.

Acante is one of a select few companies that design and manufacture all of its kiosks in the UK and where possible source from local UK based companies. This further supports the local economy and ensures a close relationship between us and our supply chain allowing greater control over both manufacturing standards and timescales.

Acante has an impressive facility in Reading with a fully equipped demo room allowing customers to view our full range of products and interact with the kiosks to aid the selection process. The demo room doubles up as a production viewing area where clients can meet the team, view the status of their kiosk order and have a personal interaction with the build process.

Our ability to build a high-quality product in the UK, provide a hands on experience and exceed customer expectations is the key to Acante's success in the kiosk market and secure customers such as Welcome Break, Sopra Steria and Unilink.

Secure, accurate and trustworthy range using the latest technologies, a biometric kiosk can uniquely identify an individual by evaluating one or more human body characteristics e.g. fingerprint, facial patterns, to authenticate the user. The biometric identification range can be used to meet a wide range of business and consumer scenarios.

Acante's biometric identification range has been designed to support the growing demand for secure access control and personal authentication. The kiosk is equipped with a flat table providing a comfortable user interface, and a wide range of options for screen configuration, mounting and peripherals.

- Products designed to meet the highest of security standards.
- Beautiful, high-quality kiosks providing a stunning and functional solution.
- Interactive kiosks allows your staff and clients to enter a building, find information or purchase products quickly and effectively without the need for human interaction.
- Enabling customers to self-serve frees up employees to utilise their skills on other more pressing task.

To provide maximum flexibility in an off-the-shelf product, the multi-touch PCAP touchscreen comes in two sizes (23.6" or 32") and the customer can select their preferred orientation.

Available in a range of colours, logos or graphics can be added to the stand to provide a personalised look.

MOUNT CONFIGURATIONS

- Single-sided floor mount
- Double-sided floor mount
- Wall mount

KIOSK DIMENSIONS

Height: 1512mm

Width: 458mm

Depth: 635mm

Touchscreen: 23.6" or 32" Multi-touch PCAP

Reliable, accurate and trustworthy range using the latest touchscreen technologies, an information kiosk can be used in various industries, particularly those that deal with direct customer contact. This range makes information as accessible as possible for the user, which in turn will help them with making informed choices.

Acante's inform range is a sleek and stylish solution for providing information in a variety of applications. The kiosk is equipped with an intelligent touchscreen that enables the user to interface with the kiosk and a wide range of options for screen configuration, mounting and peripherals.

Secure, accurate and trustworthy range using the latest technologies, a self-service kiosk can improve customer service with reduced ordering time and increased order accuracy whilst boosting sales with targeted upselling and focused marketing.

Acante's serve range has been designed to support the growing demand for interactive self-service and reduce contact transactions. The kiosk is equipped with a components panel aligned with the screen to provide a comfortable user interface, and a wide range of options for screen configuration, mounting and peripherals.

- Increased customer spend through upselling with personalised, targeted suggestions based on product selection and buying behaviour.
- Products designed to meet the highest of security standards.
- Beautiful, high-quality kiosks providing a stunning and functional solution.
- Allows your customers to serve themselves resulting in much shorter wait times and a quicker service whilst increasing spend.
- Enabling customers to self-serve frees up employees to utilise their skills on other more pressing task.

To provide maximum flexibility in an off-the-shelf product, the multi-touch PCAP touchscreen comes in two sizes (23.6" or 32") and the customer can select their preferred orientation.

The Serve-WB is an ultra-modern double sided kiosk perfect for self-service and advertising. The kiosk boasts two 32" Multi-Touch PCAP Touchscreens and a range of auxiliary components, providing an excellent customer interaction and advertising space whilst not in use.

Equipped with a high specification PC, the kiosk can run dedicated self-service software that is proven to increase revenue with targeted upselling and focused marketing, and improve customer satisfaction with reduced ordering time and increased order accuracy.

Available in a range of colours for both the kiosk and LED lighting and logos or graphics can be added to the stand to provide a personalised look.

"We were looking for a supplier who would understand our requirements and would build us a be-spoke kiosk design and we cannot be more thrilled with what Acante have delivered for us. The whole experience from the initial design phase all the way through to implementation was done with a real degree of professionalism whilst putting the customer at the heart of what they do. We are extremely pleased with the kiosks, feedback has been extremely positive from customers and colleagues and we're looking forward to working with Acante in the future"

IT Project Manager *Welcome Break*

Increased customer spend through upselling

Self-service kiosks are perfect for product promotion during the checkout process, with personalised, targeted suggestions made, based on product selection and buying behaviour.

BEK01

The *BEK01* (Biometric Enrolment Kiosk) offers a world-beating complete self-registration solution for VISA applications and immigration identification with options for client-defined customisation in an ergonomic design. The *BEK01* kiosk module collects biometric as well as documentary data authenticating a wide variety of identity documents in less than 30 seconds. Combined with facial recognition fraud is automatically prevented and Unilink's application software generates packages of biometric data as required for secure transmission.

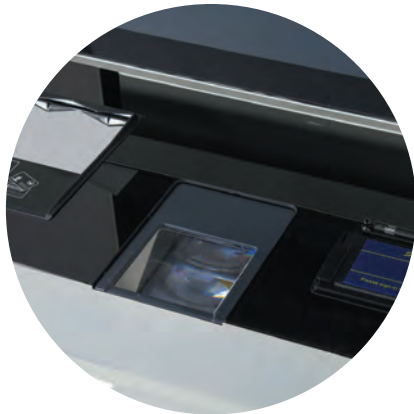

The *BEK01* will be in use in over 60 locations, including 56 local libraries, across UK as part of the new service for people applying for a work or study visa, settlement or citizenship from within the UK. The new service, announced by the Immigration Minister, will start operating in beginning of November throughout the UK delivering a streamlined and cost-effective VISA application process.

Under the new arrangements people using the service will be able to submit biometric information including photos, fingerprints, and signatures and their supporting evidence at a single appointment. The evidence will then be copied and sent to UKVI, meaning that people won't have to hand over important documents, such as passports, whilst the applications are processed.

In addition, the new process will mean that individuals can choose to upload digital files in advance of their appointment, saving even more time.

"The new streamlined service will make the visa application process quicker and easier to access than ever before for people in the UK, through increasing the use of digital services."

Caroline Nokes *Immigration Minister*
